

# COOL INTERIOR, COOL EXTERIOR – Office Upgrade with SolarZone

Hanita Coatings

**Building:**

**C.I. Construction Building**

**Description:**

**2 Story Office Building**

**Location City:**

**Snellville, GA**

**Film Used:**

**Silver 20**

**Size of Job:**

**2,200 square feet**

**Dealer/Installer:**

**Solar Sensations Inc., Steve Cobucci**

**Project Owner/Contact:**

**Mickey Cicco**

## CASE STUDY

**PROJECT TASK:**

Heat build-up at the C.I. Construction Building in Snellville, Georgia was costing the owners dearly. The concentration of sunlight and heat through the floor-to-ceiling glass was just too much for the cooling system to handle efficiently, even though the windows were dual-pane. In fact, the situation was so bad that there was a problem leasing office space on the sun-drenched south side.

**SOLUTION:**

Building owner Mickey Cicco heard from three different companies that window film could solve the problems. But it was Steve Cobucci, from Solar Sensations, who recommended installing traditional SolarZone Silver 20 reflective window film. "This film delivers exceptional heat rejection of 77%, translating into a livable environment, and greater energy savings," he explained.

**RESULT:**

"We chose SolarZone Silver 20 due to its excellent heat control properties, as well as its sophisticated appearance," commented Mickey. "The fact is that we got an added bonus," he added, "since the bid offered by Steve came in lower than two other estimates received."

"We are extremely happy with the results, and, more importantly, so are our tenants! They've noticed that the offices are cooler and more comfortable, and that glare is no longer an issue."
