

HanitaFirst Professional Installation Program

Accredited Professionals

Because the process of installing window film can be an intersection of art and science, the process of installing window film properly involves the calibration of all SolarZone and SafetyZone installers to the same criteria of installation processes and visual quality. Whether SolarZone or SafetyZone,

Accreditation by Hanita Coatings illustrates the care with which your installer approaches his or her craft.

Smart and Savvy

Even with a thorough process of Accreditation, occasionally installers encounter unanticipated hurdles. With each Accredited installer having lengthy hands-on experience and a manufacturing management support team averaging over 20 years in the window film industry, SolarZone and SafetyZone customers benefit from well-over 100 collective years experience and thousands of installations.

Therefore, you receive "smart and savvy" solutions to these hurdles rather than "fear and frustration".

Clean and Convenient

In addition to taking into account the windows upon which the film is installed and the area surrounding the windows for obstacles and/or impediments, the Accredited SolarZone and SafetyZone installer realizes he or she is 'borrowing' the space from another person while performing the installation.

As such, whether a school, hospital, office, or other building type, our Accredited installers work cleanly and conveniently to minimize disruption to tenants, students, and patients.

Union and Davis-Bacon

For certain customers, geographies, or industries, the ability to work within labor or trade organizational requirements and/or prescribed, regulated prevailing wage structures will mean the difference between a successful installation and a stalled, troubled, incomplete installation.

Our experienced manufacturing management support team and Accredited installers are prepared to meet these requirements as we have done for many projects before.
